Future of Mobile apps

Apple and thousands of mobile software developers are feasting on people's ravenous app-etite for apps

Users of iPhones, iPads and iPod Touches spent nearly 500 million dollars on applications and in-app services during the first week of the year 2015.

If sales continue at the same opening week pace, Apple and the makers of the apps would split up about \$25 billion dollars in revenue. Seventy percent from the sale of apps goes to the developers of the app and rest is kept by the company.

Apple's App Store lags behind Google's Play Store for Android devices in terms of total downloads, according to the analytical firm App Annie. That's largely because about 2 billion devices running on Google's free Android software

Play store had distributed about 5 billion dollars to developers since opening its own app market in June 2014.

Apple says its app developers have made \$25 billion since 2008. The company's store offers more than 1.4 million mobile apps in 155 countries.(The Hindu Jan 2015)

Overview of Program Content

M101

- Mobile applications history and evolution
- Responsive Design fundamentals
- Native apps development fundamentals (iPhone and Android)
- Native apps deployment fundamentals (iPhone and Android)
- HTML5 and JavaScript fundamentals Using
- Web services and JSON

M201

- Life cycle events
- Database
- Providers
- Responsive design of views
- Async execution and Services
- Sync Adapters
- Notifications
- Geo tracking features
- Project

M301

- Basics of iOS Application
- Life cycle events.
- Database and Core Data fundamentals
- Responsive design of views
- Async execution and Services
- Push notifications
- Third party frameworks
- InApp Purchasing
- Geo Tracking Features

M401

- Appcelerator
- Sencha
- JQuery Mobile
